

# FOR PROFESSORS, RESEARCH GROUP DIRECTORS, TECHNOLOGY TRANSFER EXECUTIVES, & OF COURSE, YOU

*Accelerating research collaboration and technology transfer to solve critical problems*

## Our Mission.

At **Eureka Exchange**, we believe that collaboration holds the key to solving society's most pressing challenges and we are creating solutions to support this mission.

Millions of research models are saved on drives in graduate laboratories and archives around the world, most of them are essentially lost!

Organizations are recreating these same models to solve technical problems, costing them hundreds of millions of dollars and delays in tech development.

We created a platform that addresses these two critical needs and unlocks the potential for collaboration and technology transfer:

- We provide a centralized solution for academic institutions to store, share and monetize their research models, opening a new revenue stream.
- Companies in the private sector can gain direct access to these models, saving them time and resources.

## What We Offer.

### Individual Model Management License

For researchers to host and sell their models, while enabling the transition of research models from academia to industry.

### Academic Institution License

Enterprise model management and collaboration solution for institutions and consortiums to manage research models.

### Industry End-user Access License

For companies in the private sector to gain direct access, execute, and combine models to solve technical challenges.
